Nature Conservation in Europe - Graham Tucker 2023-05-25

European ecosystems and species remain under pressure from intensive agriculture and forestry, fishing, pollution, urban sprawl, invasive species and climate change. This book provides a detailed description and critical analysis of nature conservation responses, achievements and failures, motivated by the concerning state of nature and missed biodiversity targets. It summarises Europe's nature and the impact of human activities, and then gives an overview of relevant international biodiversity treaties and the EU nature conservation policy and legislative framework. The core of the book comprises chapters written by national experts, which cover the UK and twenty-five EU Member States, providing comparative case studies from which valuable lessons are drawn. Covering wide-ranging topics such as biodiversity pressures, legislation and governance, biodiversity strategies, species protection, protected areas, habitat management, and funding, this book is of interest to a wide audience, including academics and professionals involved in nature conservation and related environmental fields.

[Freshwater key biodiversity areas in the Mediterranean basin hotspot](#) - V. Barrios 2014-01-01

While the Mediterranean basin biodiversity hotspot is well known for its globally important biodiversity, its freshwater biodiversity has not been as widely recognized for its importance. Through this project, freshwater key biodiversity areas (KBAs) have now been identified, mapped and validated throughout much of the Mediterranean hotspot. It is now important to raise awareness of their status as validated freshwater KBAs and to develop plans for appropriate conservation actions at these sites, as this biodiversity is highly threatened largely due to the conflicting demands upon a diminishing supply of fresh water which is further exacerbated by the increased severity of drought across the region.

Key Topics in Conservation Biology 2 - David W. Macdonald 2013-02-06

Following the much acclaimed success of the first volume of *Key Topics in Conservation Biology*, this entirely new second volume addresses an innovative array of key topics in contemporary conservation biology. Written by an internationally renowned team of authors, *Key Topics in Conservation Biology 2*

addsto the still topical foundations laid in the first volume(published in 2007) by exploring a further 25 cutting-edge issuesin modern biodiversity conservation, including controversialsubjects such as setting conservation priorities, balancing thefocus on species and ecosystems, and financial mechanisms to valuebiodiversity and pay for its conservation. Other chapters, settingthe framework for conservation, address the sociology andphilosophy of peoples' relation with Nature and its impact onhealth, and such challenging practical issues as wildlife trade andconflict between people and carnivores. As a new development, thissecond volume of Key Topics includes chapters on major ecosystems,such as forests, islands and both fresh and marine waters, alongwith case studies of the conservation of major taxa: plants,butterflies, birds and mammals. A further selection of topicsconsider how to safeguard the future through monitoring, reserveplanning, corridors and connectivity, together with approaches toreintroduction and re-wilding, along with managing wildlifedisease. A final chapter, by the editors, synthesises thinking onthe relationship between biodiversity conservation and humandevelopment. Each topic is explored by a team of top international experts,assembled to bring their own cross-cutting knowledge to apenetrating synthesis of the issues from both theoretical andpractical perspectives. The interdisciplinary nature of biodiversity conservation isreflected throughout the book. Each essay examines the fundamentalprinciples of the topic, the methodologies involved and, crucially,the human dimension. In this way, Key Topics in ConservationBiology 2, like its sister volume, Key Topics in ConservationBiology, embraces issues from cutting-edge ecological scienceto policy, environmental economics, governance, ethics, and thepractical issues of implementation. Key Topics in Conservation Biology 2 will, like its sister volume, be a valuable resource in universities and colleges,government departments, and conservation agencies. It is aimedparticularly at senior undergraduate and graduate students inconervation biology and wildlife management and wider ecologicaland environmental subjects, and those taking Masters degrees in anyfield relevant to conservation and the environment. Conservationpractitioners, policy-makers, and the wider general public eager tounderstand more about important environmental issues will also findthis book invaluable.

Advances in Conservation Research and Application: 2013 Edition - 2013-06-21

Advances in Conservation Research and Application: 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Conservation Laws. The editors have built Advances in Conservation Research and Application: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Conservation Laws in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Advances in Conservation Research and Application: 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. Sustainable Development (2 Volume Set) - C.A. Brebbia 2015-10-06

This collection of research papers, presented at meetings organised by the Wessex Institute of Technology (WIT), concerns a variety of issues relating to the area of sustainable development. WIT has a

long and very successful record of organising conferences on the topic of sustainability, which requires an interdisciplinary approach. Any sustainable solutions that are derived solely from the perspective of a single discipline may have unintended damaging consequences that create new problems. Thus effective sustainable solutions require the collaboration of scientists and engineers from various disciplines, as well as planners, architects, environmentalists, policy makers, social scientists, and economists. The contents of this book reflect that interdisciplinary approach, and include topics under the main areas of: Sustainable development and planning; Disaster management; Air pollution; Urban transport; Ecosystems and Water resources management.

Alboran Sea - Ecosystems and Marine Resources - José Carlos Báez 2021-05-22

The Alboran Sea represents a regional Mediterranean space where North and South worlds merges, creating a geopolitical region where marine resources and maritime activities should be managed from a national and international perspectives. It is widely known, that currently the planet is suffering a global change, and it is also affecting the Alboran Sea, its ecosystems and populations. An important first step to update a paramount vision on this region is to understand the climatic, geologic and oceanographic, including biochemical cycles, process which shapes the rich geodiversity, biodiversity, the productivity, and the sustainable use of the marine resources from Alboran Sea. The fisheries management system should take into account marine environmental variability to achieve biological sustainability of marine resources. Well-funded policy-makers' decisions require a sound science based knowledge of the interaction between the marine environment and commercial stocks. This is because the role of marine environment in the evolution of fish stocks is sometimes even more important than the one played by fishers in the commercial exploitation of them. Finally, we should analyze the different aspects of political context that could affect the management of the resources from Alboran Sea in the context of climate change. This book reviews different aspects of the Alboran Sea to help understand the current situation from the original Tethys Ocean. The book is divided into four blocks: (i) Oceanographic, geological and ecological context (chapters 2 to 7), (ii) biodiversity and ecosystems distribution (chapters 8 to 12), (iii) fisheries resources and aquaculture (chapters 13 to 20), and (iv) conservation, management and marine polices (chapters 21 to 25).

Migration Strategies of Birds of Prey in Western Palearctic - Michele Panuccio 2021-07-28

Given their roles in the ecosystem, raptors are widely considered the flagship or umbrella species among birds. Most species undertake a seasonal journey that is impressive because of the length, and the imposing natural barriers such as deserts and seas that they fly over. The migration of birds of prey has unique characteristics in the animal world because of their morphology and flight style. The flying path of Afro-Palearctic migrants between breeding and wintering grounds is determined by several factors such as morphology of the birds, geography, behavioural adaptations. The book analyses the migration patterns of raptors along the Afro-Palearctic migratory system, and summarizes the recent research on these top predator species. Behavioural adaptations such as the importance of social interactions and the modulation of the different flight styles as well as ecological interactions with the encountered environment and weather conditions en route are described in the book. Moreover, the impact of climate change on the migratory behaviour and key conservation issues are discussed. The book provides an overview of the migratory characteristics and flyway patterns of all European raptors species and also some Asian ones. These chapters have been written by some of the most important raptor specialists, giving a complete picture of the different migration strategies on the basis of both traditional methods and new technologies.

Nature Law and Policy in Europe - Andrew L. R. Jackson 2023-04-26

This volume considers current and future challenges for nature law and policy in Europe. Following the Fitness Check evaluation of the Birds and Habitats Directives, in 2017 the EU adopted an Action Plan for nature, people and the economy to rapidly improve the Directives' implementation and accelerate progress towards the EU's biodiversity targets for 2020. More recently, the EU has adopted a Biodiversity

Strategy for 2030 and proposed an EU Nature Restoration Law. This book makes a timely contribution by examining the current state of play in light of recent and historical developments, as well as the post-2020 nature law and policy landscape. While evidence suggests that Natura 2000 and the Habitats and Birds Directives have delivered conservation benefits for wildlife in Europe, biodiversity loss continues apace. The book reviews the requirements for an effective international nature conservation system, with reference to the Birds and Habitats Directives. It examines regulatory regimes, current legal issues in the fields of site protection and species protection, the protection of areas outside Natura 2000, recent developments in the EU and the UK, including the implications of Brexit, agriculture and nature conservation, litigation, science and access to justice. Written by leading experts in the field, from a range of stakeholder groups, the volume draws on diverse experiences as well as providing interdisciplinary perspectives. This volume will be essential reading for students, scholars, practitioners, NGOs and policy-makers interested in European environmental policy and law, including for example lawyers, ecologists, environmental scientists, political scientists, natural resource managers, planners and civil servants.

Birds of Spain -

Important Bird Areas in India - Asad Rafi Rahmani 2004

Edited by the Bombay Natural History Society, this book is the result of five years' exhaustive work by the BNHS. The data, which form the core of the book, have been collected by more than 1,000 people: many hundreds of professional and amateur ornithologists, birdwatchers, conservationists, forest officials, and others interested in birds. It is the most detailed publication ever produced on the subject of birds or conservation and it uncovers, analyzes and assesses all of the evidence, presenting it together with all the sources. The study has given a detailed analysis of sites that have been identified for bird conservation in India on the basis of globally accepted criteria. Each bird area is introduced with maps, analysis, avifauna section with tables of threatened species present, and a brief description of threatened birds, which have important habitats in the relevant states. The study shows that out of 465 important birds in India, 191 wildlife sanctuaries have been identified as IBAs, 52 are national parks, 23 are tiger reserves, while 198 are not officially protected.

Where to Watch Birds in Northern and Eastern Spain - Ernest Garcia 2017-04-20

The definitive guide to finding birds in Northern and Eastern Spain. This region embraces an impressive range of habitats from the Pyrenees to the sun-drenched Catalan coast. As a consequence the area is rich in birdlife and full of potential for visiting birders. Almost 200 sites are described in this fully updated third edition, with full coverage of terms of habitat, access and the species to be seen. The accounts are illustrated by detailed maps and beautiful line drawings of selected species. *Where to Watch Birds in Northern and Eastern Spain* includes comprehensive coverage of all thirteen autonomous regions, a descriptive list of all the resident, visiting and rare birds to be found, as well as advice on watching seabirds from key sites like Estaca de Bares. This edition provides better coverage than ever to one of the most popular birding destinations in Europe.

Partridges, Quails, Francolins, Snowcocks, Guineafowl, and Turkeys - Richard Anthony Fuller 2000

These species, a group of about 150 ground-dwelling gamebirds, are found on every continent apart from Antarctica. They live in a wide variety of habitats from tropical forests, high-altitude alpine zones, temperate forests, open country, to desert environment. Although widespread, little is known of the species occurring outside Europe and North America, but several species are considered at grave risk of extinction. Since publication of the first action plan in 1995 a large increase in the amount and quality of conservation work has taken place. This document provides an update on the current situation, identifies the most threatened species with this group, prioritizes conservation action needed, and outlines project briefs for the most urgent cases.

The Physical Geography of the Mediterranean - Jamie Woodward 2009-05-07

This volume explores the climates, landscapes, ecosystems and hazards that comprise the Mediterranean world. It traces the development of the Mediterranean landscape over very long timescales and examines modern processes and key environmental issues in a wide range of settings. The Mediterranean is the only region on Earth where three continents meet and this interaction has produced a very distinctive Physical Geography. This book examines the landscapes and processes at the margins of these continents and the distinctive marine environment between them. Catastrophic earthquakes, explosive volcanic eruptions and devastating storms and floods are intimately bound up within the history and mythology of the Mediterranean world. This is a key region for the study of natural hazards because it offers unrivalled access to long records of hazard occurrence and impact through documentary, archaeological and geological archives. The Mediterranean is also a biodiversity hotspot; it has been a meeting place for plants, animals and humans from three continents throughout much of its history. The Quaternary records of these interactions are more varied and better preserved than in any other part of the world. These records have provided important new insights into the tempo of climate, landscape and ecosystem change in the Mediterranean region and beyond. The region is unique because of the very early and widespread impact of humans in landscape and ecosystem change - and the richness of the archaeological and geological archives that chronicle this impact. This book examines this history and these interactions and places current environmental issues in long term context. Biodiversity in Environmental Assessment - Roel Sootweg 2009-11-12

Human induced development activities are introduced with insufficient attention to their consequences for our living environment, even in cases where environmental assessments have been carried out. This apparent lack of attention to biodiversity in environmental assessment is rooted in the difficulties we have in adequately addressing biodiversity within the scope, time frame and budget allocated for assessments. This book provides a conceptual background and practical approaches to overcome these difficulties. It integrates the objectives of the Convention on Biological Diversity, its ecosystem approach, and the conceptual framework of the Millennium Ecosystem Assessment into a comprehensive approach to biodiversity in environmental assessment. It highlights the need to consider the value of biodiversity based on its use by each stakeholder, addresses the importance of both social and economic development to reach the Millennium Development Goals, and provides insights into ways to balance present and future needs.

Habitats for Birds in Europe - Graham M. Tucker 1997

The greatest threats to Europe's birds and biodiversity come from loss and degradation of habitat. This book brings together more than 190 bird and habitat conservation experts from all over Europe, to examine the threats to Europe's eight major habitat types, and propose policies and actions to protect and restore them. Although the emphasis is on birds, particularly the 40 percent of European species with an unfavourable conservation status, many recommendations would help conserve all elements of biodiversity in the wider European environment. "An important contribution to the conservation of biodiversity in Europe" - Peter L Nielsen, European Commission. "An extremely valuable reference for bird conservationists in any continent" - The Wilson Bulletin.

Contemporary Issues in Environmental Law - Yumiko Nakanishi 2016-01-28

This book presents a variety of articles on contemporary issues in environmental law by eminent university professors of environmental law, international public law, European Union law, and comparative law in Europe and Japan. It is the first book in the field of environmental law based on the results of international conferences and research activities supported by the European Union delegation in Japan. Current essential and global topics such as principles of environmental law, climate change, biodiversity, ethics pertaining to animal rights, nuclear safety regime after Fukushima, environmental impact assessments, protecting international waters, genetically-modified organisms, and implementing international instruments, and EU rules at the national level are discussed in light of the 2009 Treaty of Lisbon and other recent international treaties, by comparing the approaches taken by the EU, European countries, and Japan. As environmental law is not just a national issue but also a global one, it is important to understand and analyse various aspects of current environmental issues. This book is a response to such needs, and represents the joint work of five Japanese and four European (two German and two Italian) professors who have succeeded in creating something that is both unique and remarkable.

The Landscape of the Sierra Nevada - Regino Zamora 2022-06-09

This book covers the landscape, geography and environment of the Sierra Nevada in Spain. The Sierra Nevada hosted the last glaciers in southern Europe. Today, it is one of the most important centers of plant diversity in the western Mediterranean and one of the most outstanding in Europe. This massif has ideal conditions to analyze past environments as well as the effects of global change on ecosystems. This can be seen in the large number of projects that are being conducted within the umbrella of the Sierra Nevada Global Change Observatory. This book summarizes all the scientific knowledge available about this massif, from the geomorphological and ecological perspectives to the recent spatial adaptive management and Open Science initiatives. Focusing on the very sensitive mountain environment of Sierra Nevada, the book intends to be a reference for many people interested in mountain processes. The audience would include scientists from all disciplines, but it would also target on an audience beyond the academia (territorial managers, environmentalists, mountaineers, politicians, technicians, etc.).

State of the World's Birds 2004 - BirdLife International 2004-01-01

Given the fundamental importance of biodiversity, we know surprisingly little about it. We are sure that it is disappearing fast, yet at present we cannot even measure progress (or otherwise) towards the 2010 target set by world leaders for slowing this loss. This BirdLife assessment examines what the best known group of living things, birds, can tell us about the state of biodiversity, the pressures upon it and the solutions that are being, or should be, put in place. It is a synthesis of current knowledge and provides a benchmark against which we can assess our efforts to conserve biodiversity in the future. An exciting testimony to BirdLife's intent and capacity to influence policy at the highest levels... gives a clear overview of how individual observations contribute to the bigger picture... a useful digest of contemporary conservation science presented in a less technical way. Paul Jepson, Birding Asia` The material is

presented in such a clear, compact and exciting way that everyone who turns the pages will have their mind focused on the problems raised... should be in every school, academic and local library. 'Biological Conservation' A 'Red Book' for the state of the planet, using the best known group of animals, birds, as examples to show what has happened, what is still happening, and what we are starting to do about it. 'Bull ABC' A most useful document for all involved in conservation and conservation education. 'Ibis' Full of interesting stories... illustrates that BirdLife is not narrowly concerned with saving birds from people, but tries to use the joy and appeal of birdwatching as a vehicle for better management of this world, so that birds as well as people can thrive... BirdLife emphasizes the need to work together with local people, engaging Site Support Groups around their priority sites. The approach is well aligned with the efforts towards sustainable development, and the publication is well suited as hand-out material for aid institutions. 'Oryx' The overall picture is grim, but the book demonstrates that there is much we can do, concluding that lasting solutions require lasting change, and the major challenges are not scientific, but social and political. Important Bird Areas of Jammu & Kashmir - Asad R. Rahmani 2013-03-07

This volume is part of a series of books on important bird areas (IBAs) of specific states, which is an extension of Important Bird Areas in India: Priority Sites for Conservation (2004) that described 466 IBAs for India. The third book in the series, this volume focuses on the IBAs of Jammu & Kashmir.

Conserving Bird Biodiversity - Ken Norris 2002-06-06

The earth's biodiversity currently faces an extinction crisis that is unprecedented. Conservationists attempt to intervene in the extinction process either locally by protecting or restoring important species and habitats, or at national and international levels by influencing key policies and promoting debate. Reliable information is the foundation upon which these efforts are based, which places research at the heart of biodiversity conservation. The role of research in such conservation is diverse. It includes understanding why biodiversity is important, defining 'units' of biodiversity, priority-setting for species and sites, managing endangered and declining populations, understanding large-scale processes, making predictions about the future and interfacing with training, education, public awareness and policy initiatives. Using examples from a wide range of bird conservation work worldwide, researchers consider the principles underlying these issues, and illustrate how these principles have been applied to address actual conservation problems for students, practitioners and researchers in conservation biology.

The Atlas of Birds - Mike Unwin 2011-07-10

Authoritative and concise, this beautifully illustrated atlas captures the dazzling diversity of bird life around the world.

The Bahía Blanca Estuary - Sandra M. Fiori 2021-08-03

The Bahía Blanca Estuary is one of the largest coastal systems in Atlantic South America. This mesotidal estuary, situated in a sharp transition between humid subtropical and semiarid climates, has a unique combination of large interannual climatic variations. The estuarine area encompasses roughly 2300 square kilometers and is composed of wide expanses of intertidal flats, salt marshes, and emerged islands, which create intricate landscape patterns. Natural environments in the estuary sustain a high concentration of marine and terrestrial species, including endemic, threatened, and endangered fish and shorebirds. Puerto Cuatros, in the inner zone of the estuary, hosts a permanent marine research station, whose records span more than 30 years of biophysical variables, and represent one of the largest time series of ecological data in South America. Beyond its ecological relevance, the Bahía Blanca Estuary is under increasing anthropogenic pressure from large urban settlements, industrial developments and harbors, raising the question of how to balance conservation and development. The Bahía Blanca Estuary: Ecology and Biodiversity offers a comprehensive review of life in the ecosystems of the estuary. The book is divided into five major sections, the first of which provides a description of the regional setting and covers key aspects of estuarine dynamics. The three following sections are dedicated to different habitat types and, within each section, the chapters are organized around major

functional groups from pelagic and benthic environments. The fifth and final section covers issues related to management and conservation. Overall, the book provides essential and up-to-date reference material on the biodiversity and ecosystem processes of the Bahía Blanca Estuary, and will appeal to a broad international audience.

For a limited time, receive a free Fodor's Guide to Safe and Healthy Travel e-book with the purchase of this guidebook! Go to fodors.com for details. Written by locals, Fodor's travel guides have been offering expert advice for all tastes and budgets for 80 years. Gorgeous Spanish colonial architecture, uncrowded white-sand beaches, and an insistent salsa beat await intrepid travelers to the Caribbean's largest island, now on the radar of many Americans thanks to the relaxation of travel restrictions. No matter where travelers go, this up-to-date guide helps them discover Cuba's unique culture, whether it's seeing vibrant artwork or sampling the region's best rum and hand-rolled cigars. This travel guide includes:

- Dozens of maps
- An 8-page color insert with a brief introduction and spectacular photos that capture the top experiences and attractions throughout Cuba
- Hundreds of hotel and restaurant recommendations, with Fodor's Choice designating our top picks
- Multiple itineraries to explore the top attractions and what's off the beaten path
- Major sights such as Trinidad, La Habana Vieja, Cienfuegos, Che Guevara Memorial, and Valle de Vinales
- Coverage of Havana, Trinidad, Camagüey, Santiago, Varadero, and Isla de la Juventud

The Birds of the Iberian Peninsula - Eduardo de Juana 2015-02-26

The Iberian Peninsula is one of Europe's most ornithologically varied regions offering a host of regional specialities. It includes famous birding hotspots such as the Coto Donaña wetlands, mountainous areas such as the Picos de Europa and the Pyrenees, the Mediterranean cork and holm oak forests of the southwest, the migration crossroads of the Strait of Gibraltar and the steppe-like plains of Extremadura and Alentejo. Large numbers of birders from around Europe visit the region to see this wealth of winged wildlife, but to date there has been no comprehensive regional avifauna in English. *Birds of the Iberian Peninsula* is a national avifauna that fills this gap in the ornithological literature. Full-colour throughout, the book begins with authoritative introductory chapters covering subjects such as geography, climate, habitats, the history of Iberian ornithology and the composition of the avifauna. The species accounts then cover every species recorded in mainland Spain, the Balearic Islands, Portugal, Gibraltar and Andorra, including the many vagrants. For each species there is detailed treatment of distribution – with maps of breeding and wintering ranges – habitat selection, population trends, historical and current status, migration and conservation.

Biodiversity and Conservation in Europe - David L. Hawksworth 2007-12-03

This book brings together a selection of original studies that address biodiversity and conservation in Europe. The contributions are drawn from a wide range of countries and discuss diverse organism and habitat types. They collectively provide a snap-shot of the sorts of studies and actions being taken in Europe to address issues in biodiversity and conservation – topical examples that make the volume especially valuable for use in conservation biology courses.

Where to Watch Birds in Southern and Western Spain - Ernest Garcia 2020-07-09

Southern Iberia is in the top rank of European birding hotspots, and the fourth edition of this popular book, first published in 1994, continues to ensure that visitors can make the most of the region's many attractions. The information on all sites has been brought right up-to-date, with revised maps and full updated site access details and species lists. Popular localities such as Doñana, Monfragüe and the Strait of Gibraltar get prominent treatment, but the reader is encouraged to wander further afield to visit other, less well-known but equally rewarding sites, including a number of additional localities that are new to this edition. This new edition is indispensable for all birders visiting this remarkable corner of Spain.
